

**Armamentarium: Dental Anatomy and Occlusion: Groove in Maxillary Central****Fissure bur - # 256 (Magnified approximately 4.5 times)**

This bur is used in the tooth prep to cut the grooves in the tooth.

**High speed handpiece**

Teeth to be waxed up will be prepared using a high speed handpiece. By doing exercises in tooth preparations, students will become learn how to cut “hard tissue” as well as to become familiar with using a high speed handpiece.

**Typodont**

A typodont is a plastic model of teeth in the mouth used to understand the mechanics and morphology of occlusion.

**No. 2 pencil**

Margins around the tooth are marked with a pencil.
