For PC

If you receive error messages in CourseWorks similar to that pictured here, the problem may be due to Internet Explorer's built-in script debugging feature.

The version of Explorer pictured here is 5.5 but other versions should have similar functionality. Try the following steps (Mac users look further below):

1. Pull down the menu item labeled ‘tools' in the Internet Explorer menu bar at the top of the screen and click on the item labeled ‘Internet Options.'

2. Click the tab labeled 'Advanced'. A list of options and checkboxes should appear. (see below)
3. Make sure the checkboxes are check as shown in the picture. 'Disable script debugging' should be checked and 'Display a notification about every script error' should NOT be checked.

For MAC

To deactivate script errors in your Explorer 5 browser for Macs, please follow the following steps:

1. Pull down the menu item labeled 'Edit' in the Internet Explorer menu bar at the top of the screen and click on the item labeled 'Preferences'

2. Expand the 'Web Browser' option and select 'Web Content' as circled on the left.

3. Make sure the checkboxes are checked as shown in the picture. ‘Enable scripting' should be checked. Below that 'Show scripting error alerts' should NOT be checked.
